

## Cloud Services for Forest Management

Need access to a proven forest record system and GIS in one single scalable environment, but do not have enough forest to justify the expense, staffing, software licencing and hardware requirements to get up your own IT system to support it? Interpine offer access to suite of software products in a remote desktop environment, including:

- **ATLAS GeoMaster,**
- **ESRI ArcGIS,**
- **ATLAS GIS Manager,**
- **PSLog Harvesting Information System**
- **Microsoft Office and Sharepoint**
- **YTGEN and PlotSafe**

In the remote desktop environment secure access is obtained via Interpines high speed servers based in Auckland. Giving the power of advanced software tools common to large corporate forest companies without having the resources and expense of setting up and maintaining the software or hardware systems, **all with no upfront purchase costs**. The software is not installed on stand-alone machines hence GeoMaster can be accessed by any computer (with Remote Desktop installed) and an internet connection.

### Cloud Service Provisions

- Industry strength full backup and restore
- Security and confidentiality
- User administration
- Software patches and updates
- Resource/GIS Forester help desk available and add on services on request
- Server hardware maintenance and replacement
- Hosting and licensing fees in easy to manage monthly invoicing
- Windows Server 2008 R2 Hyper-V Remote Desktop Services Environment
- Industry strengthened Dell Hardware Servers
- ESET virus security and protection.

### Key Functionality

- Central repository of all forestry related information
- Stores a complete history of events in the forest
- Full integration with ArcGIS, however can still work without a ArcGIS with the use of GIS Viewer
- Manage your whole estate, including reserve areas and riparian zones
- Log sales tracking and distribution
- Access to the latest Microsoft Office suite
- File storage and sharing with Microsoft SharePoint
- Easy and quick reporting

### Additional Related Services

- Training
- Customer reporting and web interface
- Mapping and data manipulation and editing
- Advanced map printing services
